

S.P. Gaschak Notes about some rare birds from the Chernobyl exclusion zone area. // Berkut. 11 (2). 2002. – P. 141-147.

The notes represent results of field observations (1991-2002) in the Chernobyl exclusion zone, concerning 20 bird species. White stork and collared dove stopped breeding in abandoned settlements. Number of black storks, cranes, eagle owls, oystercatchers and some other species were increased. Great grey shrike is an unnumerous breeding species of the zone. Greenish warbler was observed for the first time in 2000.
