

Balashov L.S., Gaichenko V.A., Frantsevich L.I. and others. "Red Book of Ukraine" in the Exclusion Zone. // Bulletin of Ecological State of Exclusion Zone of Absolute (Mandatory) Resettlement-. 1999 -. Vol. 14. - 35–37.

The forecasts for the reduction of rare and uncommon species of flora and fauna of the ChZ due to radiation damage are considered. Information on floristic and faunal composition in several sites of the Chernobyl zone is provided. Some species of plants from the Red Book of Ukraine and rare plants for Ukrainian Polissya, which are present in the plant cover of the ChZ are described. Also, the species of vertebrates and invertebrates that were observed in the territories of ChZ are given. A high rate of faunal diversity of the ChZ is noted which indicates the general favorable conditions for the existence of these animals.
