

Balashov L.S., Negrutsa K.A. Suitability of Polissya vegetation for Przewalski's horses // Przewalski's Horse (*Equus Przewalskii* Pol., 1881): problems of conservation and return to nature (Proceedings of the VI International Symposium dedicated to the 100th anniversary of breeding in the reserve "Askania-Nova") / Vestnik of Zoology, 1999. - Okr. Appendix № 11. - P. 12-15.

The report assesses the vegetation cover of natural forage lands of Polissya in order to determine their suitability for grazing horses, taking into account the number of poisonous and harmful plants to animal's, their species composition and participation in grassland. Preliminary analysis of plants of the Exclusion Zone was made to determine the level of their toxicity and harmfulness to introduced animals.
