

Vyshnevsky D. Peculiarities of Zoocenosis in the Exclusion Zone of the Chernobyl Nuclear Power Plant in the After Wreck Period // Nauk. Vestnik Uzhorod University. -2004- Vol.15. – P.20-23.

Forming of zoocenosis in the zone of exclusion of ChNPP in period after the wreck is caused, in the firstplace, by a removal of anthropogenic pressure. In these conditions spontaneous processes (disappearing of synanthropic species, appearing of rare and typical species, biocenotic regulation of communities) led to restoration of typical for Polis-sya region natural complexes. Under such conditions, taking into account a big territory and hard guarding, it's effective to use the zone for preservation of biodiversity of Ukrainian Polissya.
